

## Experiment – 3

Name: Dharanidharan P

Roll No: 240701118

### ***Survey Report on Emerging Trends in Low-Code Application Development***

#### **1.AIM:**

To study the emerging trends in **low-code application development** using the **Patient Appointment & Scheduling Management** application developed in **Zoho Creator**.

The application is used to manage patient appointment requests using forms, reports, validations and workflows.

#### **2.Traditional Application Development vs Low-Code Application Development:**

| <b>1. Traditional Application</b>         | <b>2. Low-Code Application</b>                |
|-------------------------------------------|-----------------------------------------------|
| 3. Requires more programming              | 4. Requires less programming                  |
| 5. Developer writes code manually         | 6. Drag-and-drop tools are used               |
| 7. Takes more development time            | 8. Development is faster                      |
| 9. Database is usually created separately | 10. Data can be managed through Creator forms |
| 11. Workflows require programming         | 12. Workflows can be configured visually      |
| 13. UI needs coding                       | 14. Forms and pages can be designed visually  |
| 15. Changes may require code modification | 16. Changes can be made easily in the builder |

#### **3.Benefits and Challenges of Low-Code:**

##### **Benefits:**

##### **1. Easy Development:**

- We can create the appointment form using drag-and-drop fields.

##### **2. Less Coding:**

- Only a small amount of scripting is needed for advanced requirements.

##### **3. Faster Development:**

- The application can be developed faster than a fully coded application.

#### 4. Easy Database Management:

- Patient appointment information can be stored and viewed through the Creator report.

#### 5. Easy Validation:

- We can make important fields mandatory and apply validation rules.

#### 6. Workflow Automation:

- After a patient submits the appointment form, a confirmation email can be automatically sent to the patient.

### Challenges:

#### 1. Platform Dependency:

- The application depends on Zoho Creator.

#### 2. Limited Customization:

- Some advanced requirements may need additional scripting.

#### 3. Internet Requirement:

- Cloud-based applications normally require an internet connection.

#### 4. Learning the Platform:

- Users need to learn Zoho Creator and Deluge for advanced features.

#### 5. Security:

- Patient information is sensitive, so proper access control and security are important.

#### 4. Comparison of Existing Low-Code Platforms:

| Feature                            | Zoho Creator | Microsoft Power Apps | OutSystems | Mendix    |
|------------------------------------|--------------|----------------------|------------|-----------|
| Low-code development               | Yes          | Yes                  | Yes        | Yes       |
| Drag-and-drop                      | Yes          | Yes                  | Yes        | Yes       |
| Forms                              | Yes          | Yes                  | Yes        | Yes       |
| Reports/Dashboards                 | Yes          | Yes                  | Yes        | Yes       |
| Workflow                           | Yes          | Yes                  | Yes        | Yes       |
| API Integration                    | Yes          | Yes                  | Yes        | Yes       |
| Mobile Application                 | Yes          | Yes                  | Yes        | Yes       |
| Scripting                          | Deluge       | Power Fx             | Supported  | Supported |
| Suitable for business applications | Yes          | Yes                  | Yes        | Yes       |

#### 5. RESULT:

The experiment helped us understand how **low-code development** makes application development easier and faster.

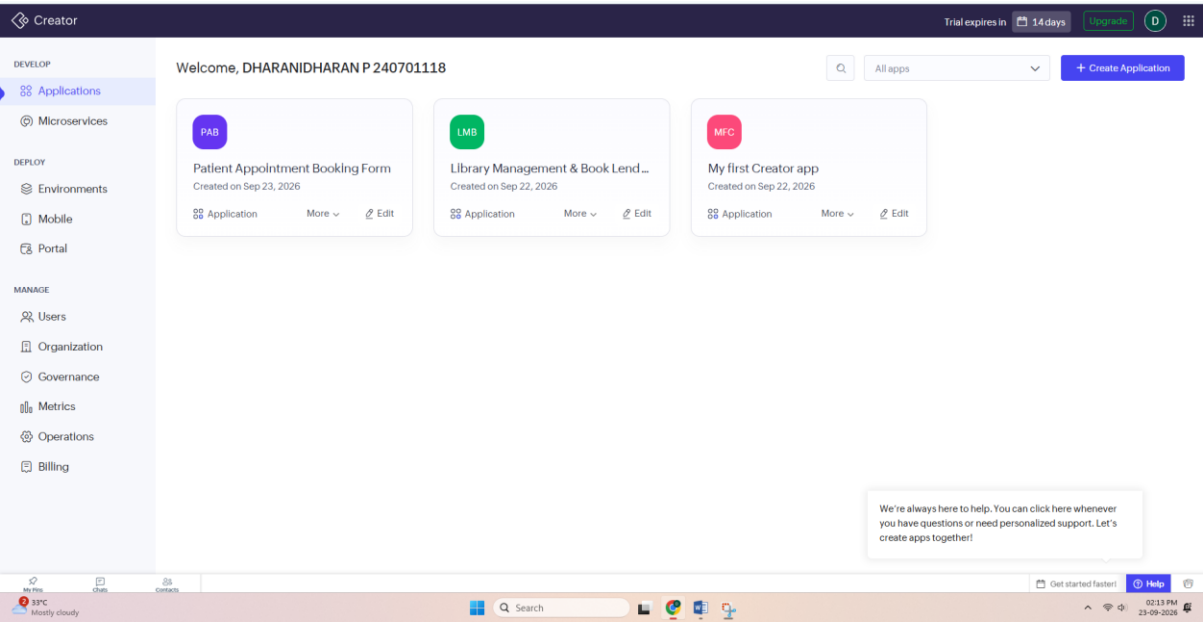

We successfully used **Zoho Creator** to develop a **Patient Appointment & Scheduling Management** application.

The application contains:

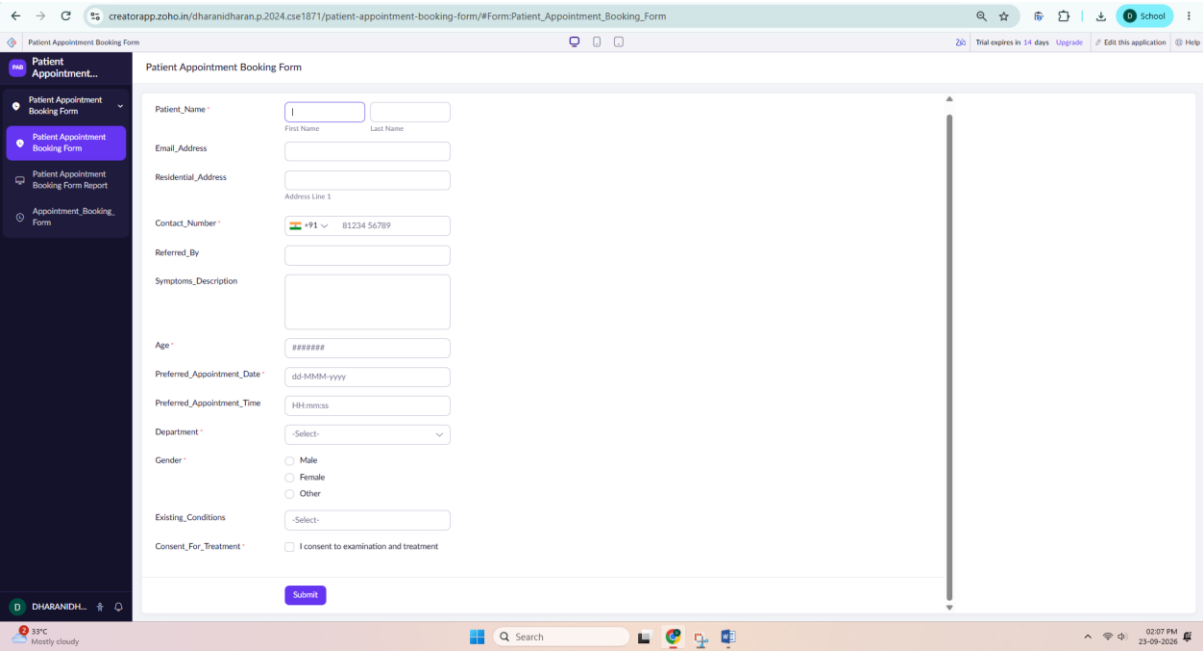

- Patient Appointment Form
- 13 Basic Fields
- Field validations
- Appointment Report
- Filters
- Appointment workflow
- Email confirmation

The report allows the front desk and doctors to review appointment requests and filter them by **Department** and **Preferred Appointment Date**.
